

❄️ CLEAN, SWEET AIR. ❄️

THE  
"SALUS"  
MACHINE.

THE "SALUS" ELECTRIC VAPOURISER.  
BRITISH PATENT NO. 25043/10.

THE SALUTARIA COMPANY  
444 STRAND, LONDON, W.C.

TELEGRAMS: SALUSVAPA.

WORKS: HOLLOWAY, N.

W.D.  
8°  
194  
BR

One knows that if the Atmosphere in a Theatre or other Building is kept pleasantly warm, refreshing and delicately perfumed, Visitors will appreciate and remember the fact.

The "SALUS" MACHINE will do this without attracting any attention or requiring any

labour, or any possibility of damage to Visitors' clothes.

The "SALUS" MACHINE only needs an Electric Lamp burning and a small quantity of "SALUS" FLUID poured into the reservoir about twice each week and it will operate for ever.

This "SALUS" FLUID has a high value as a Bactericide, containing, as it does, the various essential oils which have been proved to exercise an Oxygenous effect upon impure air—and thus, whilst destroying floating bacilli, restore or recharge it with Oxygen.

This "SALUS" FLUID is manufactured at our Works, under the supervision of a Bacteriologist and highly qualified Chemist, and it must not be classed with the so-called "Perfumed Disinfectant Fluids" offered in the market at present.

## DIRECTIONS FOR USE.

Remove outside guard and lift block out of the reservoir.  
Fix one of your Lamps (preferably an 8 c.p. Carbon)  
in the Lamp holder as shown on pages 2 and 3.

Replace block in reservoir, covering Lamp as page 4.

Next empty contents of bottle into the reservoir and  
replace outside guard. Allow Fluid to soak up the block,  
connect up by means of Flex and Adaptor or Plug and  
switch on current.

The "SALUSVAPA" can be directed to any part  
by means of a fan—very little is required at a time to  
clean and perfume a large area—therefore, do not leave  
the current on continuously.

Price £2 2s. Complete with Flex and  
Adaptor or Two-pin Plug.

"SALUS" FLUID, 5s. 6d. per pint bottle.
